

Figure 2: % responses to the types of housing needed.

Respondents were split on whether more rental properties were required, with 46% in favour and 54% against. This may need further clarification as the rental market can include private, social and affordable schemes, so there may be differences in community views depending on the type of rental property.

Figure 3 shows the type of housing development that respondents preferred; again respondents could select more than one response. Responses to the earlier question of the type of housing needed also made the following suggestions:

- Bungalows
- Small starter homes – 2 bed
- Homes with gardens not flats
- Residential care home (affordable)
- Executive homes with appropriately sized rooms and gardens.
