Figure 10: Table showing how Accident & Emergency & Minor Injury Units were rated by those that used them.

Responses to the question on how long it took for an Emergency Ambulance to come to Cleobury Mortimer were low, which possibly reflects the number of people who have needed one.

However, it is unclear why this question was being asked, as there are no qualifying questions to establish why it may have taken so long, or whether the incident necessitated an Emergency Ambulance. The additional comments do not add any further weight to this, as 6 of the 11 responses were 'not applicable'.

Respondents to the survey were also asked about services they would like in the future, once the new medical centre is completed. Results are shown at figure 11. Respondents could select as many options as they wished to.

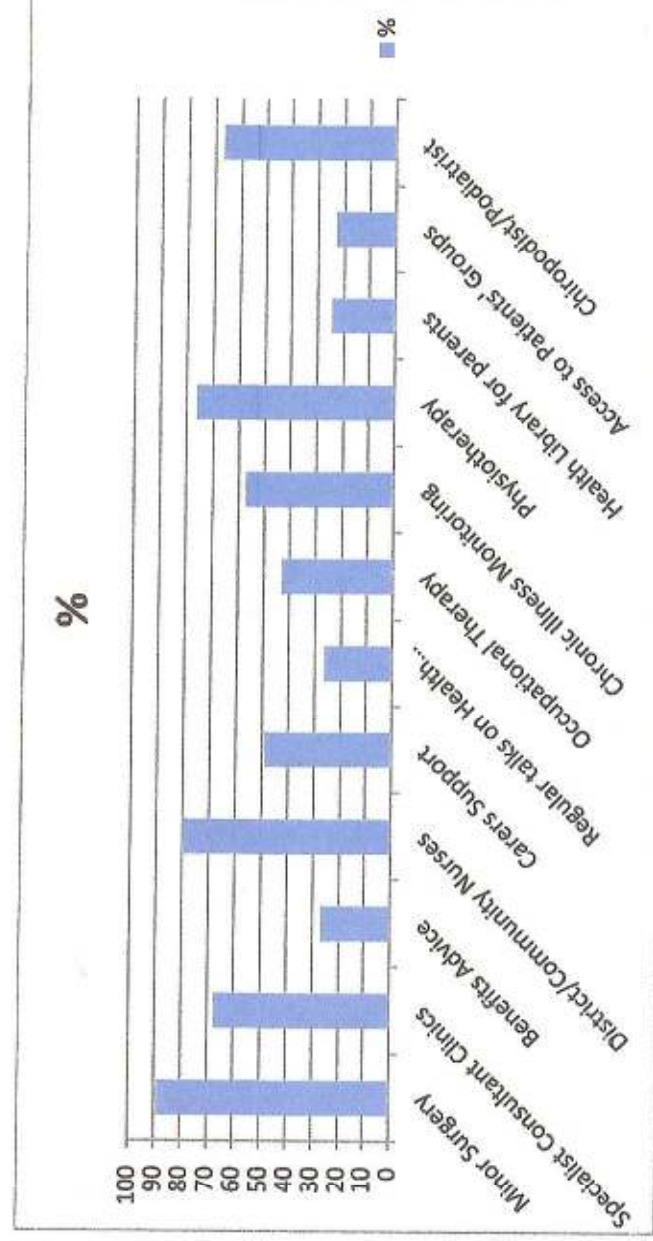

Figure 11: Services respondents would like for the new medical centre
